AUTHOR: Chebotarev, Yu.P.

TITLE: Methods of design and construction of transmission levels diagram for dispatching with intermediate amplifiers

PERIODICAL: Referativnyy zhurnal. Avtomatika i radioelektronika, no. 8, 1961, 52, abstract 8 V386 (Avtomatika,mekhanika i svyaz', 1960, no. 11, 4-7)

TEXT: Recommendations are given on the design procedure and construction of a transmission levels diagram of dispatching with voice-frequency selective ringing. Provision is made for such systems to have duplexing intermediate amplifiers. The transmission levels of the apparatus connected to the circuit within the amplifying sections, limited by intermediate amplifiers, is made constant and equal to $(P_{max} - S)$ Nepers. At the output of intermediate points the transmission levels can be made changing in steps. The ✓

PHASE I BOOK EXPLOITATION SOV/3438

Akademiya nauk SSSR. Institut mashinovedeniya

Trudy, tom 1: Vtoraya nauchno-tehnicheskaya konferentsiya aspirantov i mladshikh nauchnykh sotrudnikov (Transactions of the Institute of Machine Science, Academy of Sciences, USSR, Vol 1: Second Scientific and Technical Conference of Aspirants and Junior Scientific Workers) Moscow, 1959. 182 p. Errata slip inserted. 1,000 copies printed.

Resp. Ed.: A.K. D'yachkov, Doctor of Technical Sciences, Professor;
Tech. Ed.: B.K. Shorin.

PURPOSE: This book is intended for technical personnel engaged in the design of machines and mechanisms.

COVERAGE: This collection of scientific papers, presented at a conference held July 2-3, 1958, deals with the theory of machines and mechanisms, strength of machine parts, friction and wear in machines, and machine-building technology. No personalities

are mentioned. References follow each paper.

TABLE OF CONTENTS:

Introduction

3

Chebotareva, A.B. The Problem of Classifying Four-bar Linkages
According to the Type of Kinematic Relationships

5

The author proposes the classification of four-bar linkages into
three main classes. Diagrams of position functions for each
class are presented.

Grodzenskaya, L.S. The Design of Bar-linkages With a Dwell for
Automatic Machines

23

The author describes methods of designing bar-linkages with
dwell. These methods may also be applied in designing other
types of mechanisms with dwells.

Matevosyan, P.A. Some Problems in Analysis and Synthesis of
Mechanical and Electronic Devices With Closed Circuits

41

Card 2/6

Transactions of the Institute (Cont.)

SOV/3438

The author presents results of an investigation of complex mechanical and electronic devices used in machine tools and computing mechanisms.

Subbotin, M.I. Investigation of Fluid Damping in Vibration-measuring Instruments

53

A simple case of fluid damping is investigated. On the basis of the results obtained an improved design for accelerometers is proposed.

Krasnoshchekov, N.N. Theoretical Basis for Determining Accuracy of Spur Gears With M.L. Novikov Tooth Action

65

Korablev, S.S. Investigation of Resonance Properties of Mechanical Systems

75

Results of theoretical and experimental investigations of the process of transition through resonance in mechanical vibrating systems are presented. The results of an investigation of resonance properties of a centrifugal vibrator with non-linear restoring force are discussed.

Card 3/6

Transactions of the Institute (Cont.)

SOV/3438

Rastrigin, L.A. Dynamics of the Transition Through Resonance of Vibrations of Shafts With Different Moments of Principal Inertia, With the Coupling to an Engine Taken Into Account
Vibrations of shafts with different principal-inertia moments during transition through the zone of static instability are investigated. Equations of motion and methods for their solution are presented.

89

Osipov, K.A. Investigating the Process of Producing Splines on Shafts by Broaching or Planing With Gang Tools
Basic theoretical considerations on the selection of methods for cutting splines in shafts are developed. Broaching and planing are experimentally investigated and recommended as the most efficient methods for cutting splined shafts in large-lot and mass production.

101

Komarov, L.Ye. Investigation of Methods of Compacting Casting Molds

The effect of vibrations on the process of compacting molds by compression is investigated. Results indicate that vibrations

121

Card 4/6

Transactions of the Institute (Cont.)

SOV/3438

make it possible to obtain uniformity of density at compression pressures several times lower than those used in compacting without vibration.

Demkin, N.B. Investigation of Contact Areas of Rough Surfaces 131
The relationship between the actual contact area (consisting of elastic and plastic contact areas), the surface roughness, and the material properties of two surfaces in contact is investigated. Results indicate that the size of the actual contact area is considerably affected by the geometry of the surface.

Krashchin, M.D. Investigation of the Accuracy of Determining Wear by the Method of Crescent-shaped Indentations 143
An experimental investigation was made of the accuracy of determining metal wear by the indentation method, involving measurement of the length and calculation of the reduction of depth of a crescent-shaped recess cut into the metal surface. The method of investigation and the special instruments used are described.

Card 5/6

Transactions of the Institute (Cont.)

SOV/3438

Makhovenko, A.I. Investigation of Lubricant Circulation in a Model of the Oil Bath of a Vertical-pivot Thrust Bearing Used in Large Hydraulic Turbines

155

Lubricant flow in the bath and between shoes of a thrust bearing (without cooling) was investigated by a thermo-anemometric method. A testing machine, built for this purpose at the Hydrodynamic Friction Laboratory, Institut mashinovedeniya, AN SSSR (Institute of Machine Science, Academy of Sciences, USSR), is used. The results of the investigation are described.

Khurshudov, G.Kh. Investigation of Stresses in Frames With Plate-like Cross Beams

167

The author discusses an experimental and theoretical investigation of stresses in composite and solid frame structures. The non-linear distributions of stresses and strains are shown in diagrams.

TITLE: Investigation of the Processes of Anodizing of Aluminum Alloys
in Oxalic Acid (Issledovaniye protsessov anodirovaniya
alyuminiyevykh splavov v shchavelevoy kislotе)

PERIODICAL: V sb.: Korroziya i zashchita metallov. Moscow, Oborongiz,
1957, pp 342-353

ABSTRACT: In the process of anodizing of Al and its alloys (AMg, AMts,
and D16) in 3% oxalic acid a decrease in anode cd is observed.
For example, during the anodizing of Al and AlMg for one
hour, the cathode cd decreases from 5 to 1.4 amp/dm²; in the
course of anodizing of D16, it decreases from 5 to 2.8 amp/dm²;
the thinnest films (F) form on the D16 alloy, and the thickest
ones on the AMg alloy. The porosity of the anodic films was
determined by the gravimetric method, i.e., by filling of the
pores with oil. The greatest porosity was observed on D16
alloy and the least on Al. The rate of dissolution was estab-
lished for the dissolution of oxide F in 3% oxalic acid proceed-
ing simultaneously with its growth. The highest rate of

Card 1/2

SOV/137-58-10-21376

Investigation of the Processes of Anodizing of Aluminum (cont.)

dissolution of anodic F was observed for D16, the lowest for Al; this is explained by the different porosity and development of the surface of the F. The electrical insulating properties of the F can be considerably improved by filling the pores with 1154-grade (TUMKhP 1013-43) glyphthalic-oil lacquer.

Reliability of potentiometric transducers and its technological provision
(Nadezhnost' potentsiometricheskikh datchikov i yeye tekhnologicheskoye obes-pecheniye) Moscow, Izd-vo "Mashinostroyeniye", 1966. 113 p. illus., biblio.
6800 copies printed.

TOPIC TAGS: potentiometer, aircraft flight instrument, precision instrument
industry, aircraft engine instrument, instrumentation satellite, precision
potentiometer

PURPOSE AND COVERAGE: The book was written for engineers in the instrumentation
industry, designers, design bureaus, and research-laboratory staffs. It deals
with problems of aircraft-instrumentation reliability, possible defects in
potentiometers, and the connection between these defects and the technology pro-
ducing them. On the accuracy and reliability of potentiometers depend the
accuracy and reliability of aircraft instrumentation in automatic navigation
systems which are connected to radio systems and their components. The book
analyzes the use in potentiometers of metallic and nonmetallic materials such as
glass-fiber-reinforced plastic and glass-ceramics. The author stresses the im-
portance and reliability of windings, etc., and the effect on instruments at

TITLE: Change of properties of polymeric films during accelerated aging B

SOURCE: Plasticheskiye massy, no. 12, 1965, 63-64

TOPIC TAGS: packing material, polyethylene plastic, polyvinyl chloride, thermal aging, permeability measurement, tensile strength

ABSTRACT: Polyethylene films of low and high density, polyvinyl chloride, and cellophane polyethylene films, utilized as a preferred packing material, have been tested under conditions of long storage at variable temperatures and humidity. Experiments duplicated conditions of moist tropical climate and were conducted (in cycles) for 6 months. The test conditions were: temperature of +50C at relative humidity of 98% was maintained for 8 hours, then for 16 hours with the same humidity but at temperatures of 20 to 240. The cycles were repeated 25 times within each month. One month was devoted to testing at -40C. Properties observed were: appearance, elasticity, steam permeability, water permeability, and tensile strength. It was determined that the tensile strength and elasticity of the films did not change to any significant extent. Steam permeability of polyethylene films increased by 15

a factor of 2.5, of polyvinylchloride film by a factor of 4, and of cellophane-polyethylene by 25%. Water permeability of most films dropped to 1/2, but did not change at all in some films. At low temperatures, the steam permeability increased slightly, while the water permeability generally decreased. Orig. art. has: 7 tables.

ABSTRACT: On 24-25 March 1958, the Geographical Society of the USSR and the North-West Geological Administration of the Ministry of Geology and Conservation of Mineral Resources convened a conference on the paleogeography, quaternary geology and geomorphology of the north-west European part of the USSR. The conference heard the following reports: N.N. Sckolov on "The Contemporary Stage of Investigation of the Relief and Quaternary Sediments of the North-West European Part of the USSR"; M.A. Lavrov on "The Stratigraphy of Quaternary Sediments of the Kola Peninsula"; G.S. Biske on "Quaternary Sediments and the Paleography of Karelia During the Quaternary Period"; Ye.V. Rukhin on "Genetic Peculiarities of Glacial Deposits of the Kola Peninsula and the Leningrad Oblast"; O.M. Znamenskaya and

TITLE: On the History of the Lena Valley (K istorii doliny Leny)

PERIODICAL: Izvestiya Akademii nauk SSSR, Seriya geograficheskaya, 1958, Nr 5, pp 42-46 (USSR)

ABSTRACT: Data is given on the relief structure of Siberia and in particular on the development of the Lena river valley. The author assumes the ancient origin of the valley. On the basis of the presented material he states that the basic characteristics of the valley structure are determined by the geological-structural peculiarities of the region. With respect to the different ages of various parts of the valley, the age of the oldest terrace is being evaluated as Upper-Tertiary. It can be assumed that the Lena valley was formed at the end of the Neogene period. All existing data on stratigraphy of Cenozoic deposits and the geomorphological peculiarities of the valley structure permit the assumption that its development dates from the end of Tertiary to the beginning of Quaternary.

2082. SCHISTOSOMA DERMATITIS IN MAN (Russian text) - Chebotareva

R. S. - MED PARAZIT. I PARAZIT. BOL. 1957, 26/2 (172-175)

A case of Schistosoma dermatitis treated in the Dymerskii region of Kiev province in August 1955 is described. The patient, after having his legs immersed (20-40 cm.) in the water of the local stream for 2 hours, developed some irritation in the skin of the legs. During the following night the pruritus increased and erythema and papules appeared. The papules later became purulent and ulcerated. Pruritus disappeared after 2 weeks but large papules persisted for 5-6 weeks. In skin scrapings the tails of cercariae of schistosomatidae of the type the adult form of which is parasitic in birds were found. At present more than 10 types of schistosomatidae capable of invading the skin and causing dermatitis are known, although they are incapable of further development in the human organism. (S)
